

After Sales Service. **PREMAS®**. Field Service.

The key to keeping up the efficiency of any plant in a sustainable manner is to carry out regular servicing by qualified personnel. This minimises maintenance costs and provides maximum operating availability.

AUMUND's After Sales Service network provides great benefits for the Group's customers. It is able to get spare parts and wear parts quickly to any location in the world from well-stocked warehouses in **Germany** (Rheinberg), **USA** (Atlanta), **Brazil** (Ipatinga/MG), **Saudi Arabia** (Rhyad) and **Hong Kong**.

In addition to the supply of spare parts, AUMUND offers the Preventive Maintenance Services of its **PREMAS®** team, which carries out inspections of AUMUND equipment as well as machinery of other manufacture all over the world. Consulting and advisory services are given on questions of maintenance, spare parts, process optimisation and conversions, in particular on production sites in the cement industry or other industries.

AUMUND **After Sales Service** provides for supply of spare parts to any international location and for preventive maintenance by **PREMAS®**. With the support of **PREMAS®**, maintenance work can be coordinated efficiently, and the lifetime of equipment can be maximised.

In cases where it is planned to increase capacities or to modify existing processes, conversions and modernisations of equipment are often a viable alternative to purchasing new machinery. AUMUND's team of conversion specialists develops and implements the right concept for any given situation.
